

MUHAMMAD UMER AHMED

Undergraduate Computer Information & Systems Engineering

muhammadumerahmed95@gmail.com | (+92) 332-8264639 | Karachi, Pakistan | github.com/xorkho | linkedin.com/in/Muhammad-UmerAhmed

SUMMARY

Third-year Computer Information Systems Engineering student at NED University (CGPA: 3.27/4.0) with hands-on experience in full-stack web development (Django + React) and applied machine learning. Built production-style systems including a RAG-based AI recommendation engine with local LLM integration and a full e-commerce platform with secure checkout. Targeting software engineering and ML internships where I can contribute to scalable, data-driven applications.

EXPERIENCE

NJ Marketing — Video Editor Remote (Canada-based agency)

Dec 2023 – Present

- Produced short-form video content — ads, reels, and brand videos — consistently aligned with client briefs and platform-specific trends across social media channels.
- Delivered brand-focused edits optimized for social media engagement, applying motion and aesthetic principles across multiple client verticals.
- Collaborated with marketing teams to ensure creative output aligned with campaign objectives and target audience preferences.

EDUCATION

NED University of Engineering & Technology — Karachi

Oct 2023 – Present

B.E. Computer Information System Engineering (3rd Year, 6th Semester)

CGPA: **3.27 / 4.0**

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML, CSS

Frameworks: Django, Django REST Framework, React.js

ML / Data: Scikit-learn, NumPy, Pandas, Matplotlib, Seaborn, NLP, Embeddings, RAG pipelines

Databases: PostgreSQL

Tools: Git, GitHub, Postman, Jupyter Notebook, VS Code, Ollama

PROJECTS

MovieVerse — AI-Powered Movie Recommendation System

github.com/xorkho/MovieVerse

Django REST Framework · React.js · NLP Embeddings · RAG · Ollama · LLM · PostgreSQL

- Architected a full-stack RAG pipeline — precomputed NLP embeddings from IMDB data using vector similarity search to deliver semantically relevant, personalized movie recommendations.
- Built "Flick Buddy"**, a context-aware AI chatbot powered by locally hosted LLMs via Ollama, generating streaming recommendations grounded in retrieved embedding context.
- Designed a decoupled full-stack architecture with Django REST APIs and a React frontend, integrating embedding retrieval, RAG context injection, and LLM generation into a single coherent pipeline.
- Implemented RESTful API endpoints to serve recommendation results, supporting real-time query processing and scalable backend logic.

Fitness Freak — Full-Stack E-Commerce Platform

github.com/xorkho/Fitness-Freak

React.js · Django · Django REST Framework · PostgreSQL · RESTful APIs

- Built a full-stack fitness e-commerce platform with a React.js frontend and Django REST Framework backend, supporting end-to-end product browsing, cart management, and secure checkout.
- Designed and exposed RESTful APIs to decouple frontend and backend, enabling independent scalability and clean separation of concerns.
- Engineered a responsive, SEO-optimized UI using semantic HTML and performance best practices, improving cross-device usability and search engine discoverability.
